FOR IMMEDIATE RELEASE

LIONVILLE DESIGNS CLEAN ROOMS TO MEET OR EXCEED USP <797>

REQUIREMENTS using our extensive area of modular fixtures to create efficient, time-saving workflow patterns for both anterooms and cleanrooms. Lionville fixture components combine wood, fabric, and steel for toughness and durability without compromising function and style. Furthermore, fixture components are modular, freestanding, and easily re-configurable to keep pace with future cleanroom requirements.

Lionville fixtures provide optimum storage space per square foot with flexible over and under counter drawer / shelf modules that put virtually every inch of space to functional use. Even reconstruction projects with limited space availability can benefit from efficient Lionville fixture plans without compromising productivity.

Lionville designers will guide you in planning your sterile preparation areas to achieve regulatory <797> compliances today with foresight into planning for tomorrow's requirements as well.

Initial design services are free, for more information visit www.lionville.com or call 800-523-7114.
